

## SPRING MOUNTS

(Type "Y-4-100" Series 1" Deflection)

Type "Y-4" series mounts with one inch deflection solve troublesome vibration problems. These mounts are preferred over most rubber mounts due to their higher static deflection. "Y-4" type spring mounts are designed for noise and vibration control application in critical areas on concrete.

**YE – 4 (Bolt Top)**

**YF – 4 (Flat Top)**

**YP – 4 (Pin Top)**

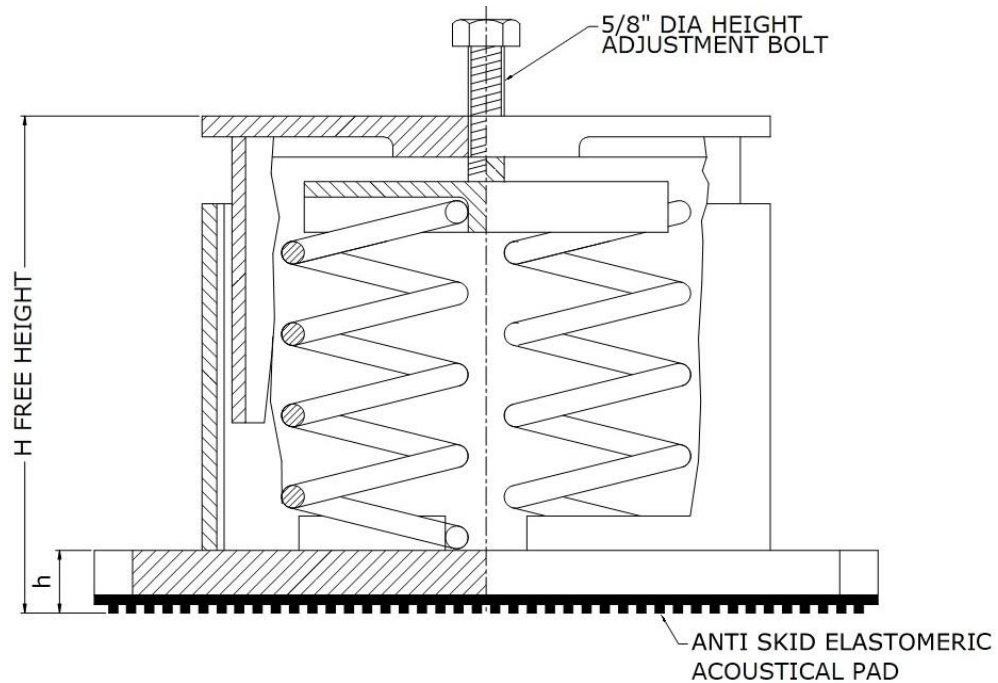

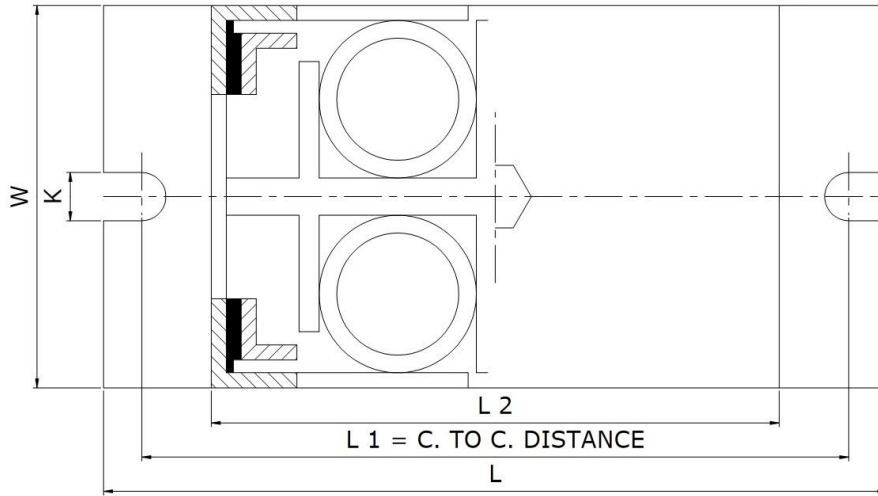

**YN – 4 (Neoprene Top)**

## FEATURES:

The Y-4 features a three piece cast iron and powder coated housing for the spring. The mounts are provided with slotted mounting holes and a non-skid elastomeric acoustic pad on the base for bolting to the floor. Resilient elastomeric rubbers on the inner panel prevent metal to metal contact and allow the springs to function properly. These mounts have a built in leveling device (external or internal). These spring mounts can also be supplied with flat top or non-skid neoprene top in case of internal level adjustment. All springs are hot dip galvanized.

## APPLICATION:

For all air conditioning equipments, compressors, air handling units, centrifugal fans, pumps, chillers and other similar application.

## NOTE:

Adjust mounting so that upper housing clears the lower housing by at least 1/4" but not more than 1/2".
